## Vaccine Data by Zip Code

## USA COVID 19 Status

## Monkeypox

As of August 1, Philadelphia has had **82** confirmed monkeypox cases, according to the Philadelphia Department of Public Health.

There have been **170** confirmed cases in **Pennsylvania**, **155** in **New Jersey** and **five** in **Delaware**, according to the CDC.

It's important to monitor symptoms.

Stay home, talk to your healthcare provider, they can probably help guide you on the best way to get tested

If you've been exposed, but don't have symptoms, "You don't have to quarantine, but contact the department of health, especially if you know the other person has monkeypox because you might be eligible for a vaccine.

On Wednesday, **eight more cases** were confirmed in **Bucks County**.

If you think you've been exposed to monkeypox, isolate at home and call your doctor.

The virus is spreading through prolonged **skin-to-skin contact**, and anyone can get it.

Monkeypox starts with a lot of the classic virus symptoms: tiredness, pain, a headache, a fever. But then the classic ones are these pox marks, these lesions, they can start off looking just like a pimple.

### **A Monkeypox is the National Health Emergency**

**The Air Quality Partnership and PDPH** have issued the following air quality alert: **Code Orange Ozone Action Day for today, Saturday, and Sunday.**

During Air Quality Action Days, protect your health by limiting strenuous outdoor activities.

PDPH will continue to monitor the situation and issue updates as they are received. For more information
